Project Design Phase
Problem – Solution Fit Template

Date	11th October 2026
Team ID	ServiceNow - A2
Project Name	Car Rental Request Automation in ServiceNow
Maximum Marks	2 Marks

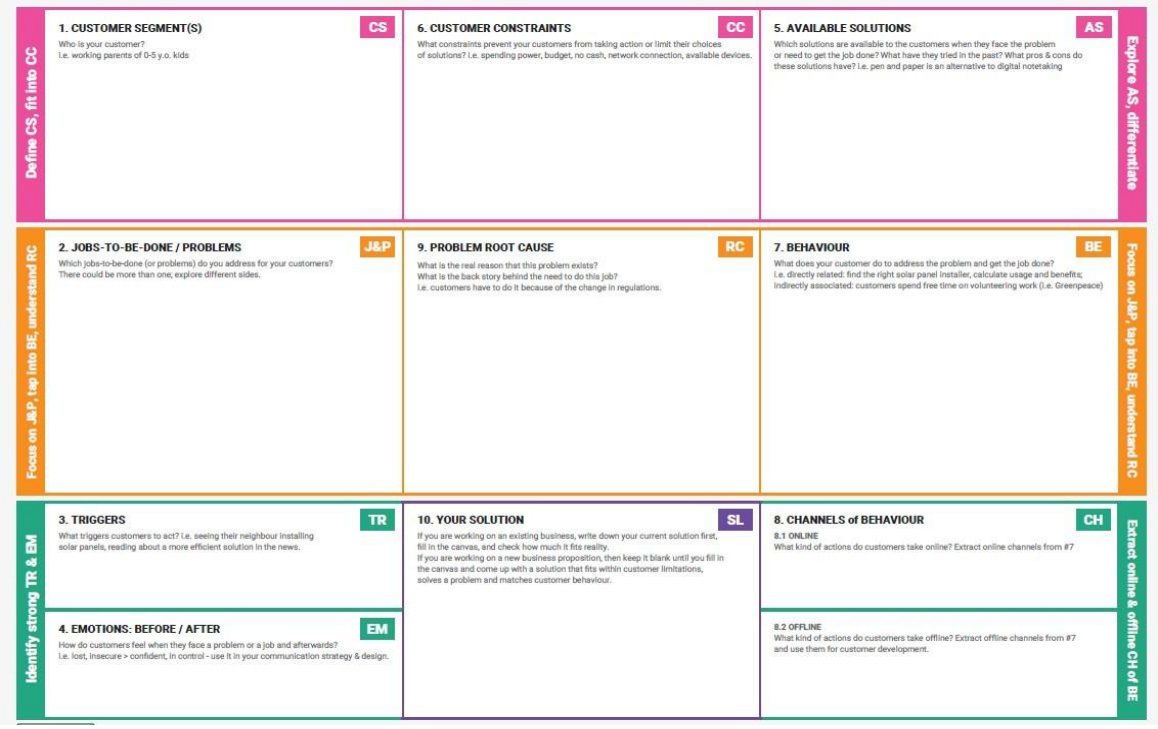

Problem – Solution Fit Template:

The Problem-Solution Fit simply means that you have found a problem with your customer and that the solution you have realized for it actually solves the customer's problem. It helps entrepreneurs, marketers and corporate innovators identify behavioral patterns and recognize what would work and why

Purpose:

- ❑ Solve complex problems in a way that fits the state of your customers.
- ❑ Succeed faster and increase your solution adoption by tapping into existing mediums and channels of behavior.
- ❑ Sharpen your communication and marketing strategy with the right triggers and messaging.
- ❑ Increase touch-points with your company by finding the right problem-behavior fit and building trust by solving frequent annoyances, or urgent or costly problems.
- ❑ **Understand the existing situation in order to improve it for your target group.**

Problem–Solution Fit – Car Rental Request Automation

The proposed ServiceNow solution directly addresses the identified problems of manual car rental requests, incomplete information, unclear approval status, manual assignment and repeated follow-ups.

Problem–Solution Mapping

Identified Problem	Root Cause	Proposed ServiceNow Solution	Expected Improvement
Employees do not have one standard request channel.	Requests may be handled through emails/calls or different formats.	Provide one Car Rental Request catalog item.	Consistent and easy request submission.
Requests may be incomplete.	Required information is not consistently captured.	Use mandatory catalog variables and validation.	Fewer incomplete requests.
Approval status is unclear.	Manual approval communication and follow-up.	Automated approval with status updates.	Better visibility and faster decisions.
Requests must be manually forwarded to Transport.	No automated routing path.	Assign approved RITMs to the Transport assignment group.	Clear ownership and reduced delay.
Vehicle availability is not visible.	Availability is coordinated manually.	Transport records availability and fulfillment details on the RITM.	Traceable fulfillment.
Employees repeatedly ask for updates.	No central status tracking.	RITM status tracking and notifications.	Reduced follow-up and improved user experience.
Management has limited process visibility.	Request data is spread across communication channels.	Centralize requests in ServiceNow for reporting.	Better monitoring and continuous improvement.

Fit Assessment

The solution has strong problem–solution fit because each major user pain point is addressed by a specific ServiceNow capability. The design can also be extended later with additional approval rules, vehicle availability data, reporting dashboards or integrations without changing the basic request lifecycle.
